Intermediate Gov/Credit (net of fees)	3.55%	1.24%	1.96%
Bloomberg Intermediate Gov/Credit	3.00%	0.85%	1.71%

MERGANSER CAPITAL MANAGEMENT, LLC

INTERMEDIATE GOV/CREDIT GIPS REPORT 2024 (CONTINUED)

- Merganser Capital Management, LLC ("Merganser" or the "Firm") claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Merganser has been independently verified for the years ended December 31, 2002 through 2024. The verification reports are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report..
- Merganser is a professional investment management and advisory organization that provides investment services primarily to institutional clients. Merganser was acquired by and is a subsidiary of Providence Equity Partners, LLC effective October 2013. The management of assets is based upon investment objectives and other factors that the clients have specified. Investment objectives can be delivered through individually managed accounts or through private pooled investment funds. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.
- The Intermediate Gov/Credit Composite seeks to exceed the total return of the Bloomberg Intermediate Government/Credit Index by investing primarily in investment grade fixed income securities. The composite includes only fee-paying accounts over \$10 million, with a benchmark of the Bloomberg Intermediate Government/Credit Index or similar, under management for all periods during which the Firm had full discretion, including those clients no longer with the Firm. Effective January 1, 2023, in addition to meeting the Firm's definition of Discretion, each account in the composite must allow at least 10% in 144A securities and must allow at least 25% in securities rated BBB (all gradations), using the lowest for split rated securities.
- Benchmark is the Bloomberg Intermediate Government/Credit Index. This index is the 1-10 year component of the U.S. Government/Credit index, which consists of publicly issued, investment grade, U.S. dollar-denominated securities including U.S. Treasuries and Agencies, corporate securities and securities issued by foreign governments and multilateral organizations.
- Gross returns are presented gross of management and custodial fees but after all trading expenses. Net performance is calculated and presented using the highest fee schedule for the strategy. The standard fee schedule is 30 basis points (bps) on first \$50mm, 25 basis points (bps) on next \$50mm and 20 basis points (bps) over \$100mm for intermediate bond accounts. Past performance is no guarantee of future results. Valuations and returns are computed and stated in U.S. Dollars. This composite was created in December 1992 with a performance inception date of January 1, 1990. A complete list and description of Firm composites is available upon request.
- Liquidity: For withdrawals of 20% of an account's value or greater, the account is considered non-discretionary and is excluded for months which include the date of the first sale through the date of the actual withdrawal. For deposits of 20% of an account's value or greater where the Firm is prohibited from matching duration with non- spread product, the account is considered non-discretionary and is excluded for the month when the deposit occurs and the subsequent month.
- Composite dispersion is computed using an asset-weighted standard deviation measure using returns presented gross of management fees calculated for the accounts in the composite at the beginning of each month. Dispersion is not considered meaningful and is not presented when there are five or fewer accounts included in the composite for the entire year. The three-year annualized standard deviation measures the variability of composite (gross of fees) and benchmark returns over the preceding 36-month period. The standard deviation is not presented for periods where there is not a continuous 36-month history of returns.
